

iSECUREtrac System Tracks and Monitors Convicted Sex Offenders

[< back](#)

Product Can Track California Sex Offenders for \$6 a Day; Already Used In Nine States

OMAHA, Neb., Jan. 13 /PRNewswire-FirstCall/ -- iSECUREtrac(TM) Corp. (OTC Bulletin Board: ISRE), an industry leader in the development of global positioning systems (GPS) for tracking and monitoring, is currently supplying its tracNET24 system for use in monitoring convicted sex offenders and others in the criminal justice system. The product is designed to be worn by rapists, child molesters, and other less-violent offenders while they are moving about the community. tracNET24 uses GPS to track their movements, and makes that information available to authorities from a central, secure web site.

"We developed tracNET24 to help solve the problems of monitoring sex offender activities and whereabouts that California and many other states face today," said Jim Stark, president of iSECUREtrac Corp. "Use of our cost effective system greatly enhances the effectiveness of the over-burdened corrections departments and their officers. The problem in some states is at epidemic proportions. Our tracNET24 product is already being used and is shown to be effective for offender monitoring in Kansas, Iowa, Mississippi, Florida, North Carolina and Indiana, and is being tested in several other locations. Using our system, officers know if a sex offender has fled or is not where he is supposed to be," Stark added.

The iSECUREtrac system is a cost-effective automated monitoring and reporting system. Officers and agencies use tracNET24 to keep track of individuals under court-ordered release. Using the system, officers establish schedules for each individual, and are automatically notified of violations that occur, enforcing compliance and accountability. A typical tracNET24 system costs agencies under \$6.00 a day, including equipment.
