

The Tropical Dining Room

Welcome to your exotically tropical dining room.
This room includes the tiled table with 4 slat sled chairs and the Fish Tank ensemble.

The room includes a view of the hillside and a view of the Patio.

The Air Conditioner is an 18000 BTU Carrier A/C that easily cools the Dining Room, Living Room, Patio & Kitchen in 30 minutes on the hottest of days in August. There is no reason to run it all day on those *few days* that are extreme. If you come home at 3pm and put it on, you will be very comfortable by 3:30... By the way, we do get the Ocean breeze down Mission Valley during the summer months. As a consequence, just 1 mile to the east and its 5 degrees warmer (the air is blocked by Adobe Falls...yes, there really is an Adobe Falls).

Let's exit the dining room and examine your kitchen.

There are 2 entries to the "Galley." One from the dining room and one from the hallway near the outside door. The "Galley" as we call it, is small but is loaded with storage and is extremely functional for your cooking need. Let's go there now...
