

POISONING FOUNTAIN

On the 16th of June 03, I observed the City Of Laredo Texas Custodian wiping the water fountain with a liquid spray, I asked him what it was, and discovered that it to be a “metal polish” “containing “AMMONIA HYDROXIDE” :(I informed him that he could not use that on any food surface:(and that it clearly states that on the label), nor can it be used on any drinking fountain because it contains ammonia hydroxide: (he said that he had to do his job, and that he had to clean, and that the city gave him that chemical, and ignored my warning, and continued to use it.

Note:

“25” or “30” years ago I was in the library, I drank some water from the fountain, and sat at a table in a few minutes my 2nd molar right side began to hurt: (feeling that I had to spit), I went to the wash room, and when I drank cold water, my molar “EXPLODED” :(At that time I could not understand why ... :(But I do now): (the city used the same type of “metal polisher” back then also ... (All Cities must educate their people in “Janitorial Engineering”, as was I long ago) ... The City must be sued ... :(they refuse to pay attention): (as I have informed the City Of Laredo Texas on various occasions...
