

Essay #1

Few years ago, I always asked my mother anything about me that I can't remember, because I am too little. Once it really deep in my heart is she told me I would study mathematic everyday after school when I was in kindergarten, that why I always be the first three in my grade, but now! I got a shock suddenly. I tried to recollect as much as I could. I found that study and work hard are the rules for success!

In the second to fourth year in primary school, which mean the first grade to third grade in America, I fall in love with mathematic, but the most reason why I love mathematic because of my maths teacher. I can't remember she taught good or not, the only thing that I can remember was she will give me a gift (ruler, eraser, pen, etc...) when I was the top five on a maths quiz or test.

After these three years, I tried to play online game in the computer which introduced by some of my friends, and I became spend time on it much more than my homework! Be sure it was a bad news for me, but who know when you indulged in it. In the fifth year to the second year of my secondary school, I could still handle it by using the mathematic theory that I learned. Luckily, I could also got around seventy something or higher in the quiz.

I got a bit fall behind in from my third year, until I got an unsatisfactory results in an important exam (HKCEE). I am well aware that it is too late, but I knew that hard work can make for lack of talent! So I study hard from the year which I became a college student. And I know that if I keep studying then I will get a better and better grade from now on.

Study what you learn just like a brick that as same as building your knowledge. Gaming or playing will be like raining, it may good for you a few time for relax, but too much may slowing down your efficiency or destroy what you build. What you wanted to have? That your choice.
