

Mathematic changed my life

Few years ago, I always annoyed my mother for asking anything or fun what about me that I was too young and I can't remember. One thing it really deep in my heart was she told me what would I do after school every day when I was in kindergarten, that why I always be the top of the three in my grade, which it read the book what I learn on that day and study, but now! I got a shock suddenly, because I thought what making these big different between now and when I was a little kid. So I tried to recollect my memories back as much as I could. And it make me found out how important study and work hard are, and the rules for success! Which were the most effective way and let you know there is no exception for reap without sowing in this world.

In the second year to fourth year in primary school, which mean the first grade to third grade in America, I absolutely fall in love with mathematic, but I thought the biggest reason why I love mathematic so much is because of my maths teacher. Actually I can't remember what she taught us in the books and good or not, but the only thing that I will not forgot in this life was she will give me a gift (ruler, plastic eraser, pen, etc...) every times when I was the top five of the results in a maths quiz or exam. And I think it was a first cause that support me to study hard before any maths quiz or exam. It may also the only reason that make me loved her and make me focus on her teaching and keep quiet in the lesson.

Unfortunately, it was not represent an eternal truth. After these fews years, my favorite maths teacher has gone and I learned how to play online game in the computer which introduced by some of my friends, and I became spend much more time on it than my homework! (almost all the times if you saw me that I should sit next to the computer, it kind of crazy and it totally stopped my work) It may the reason that I stopped my "study plan" or I believe that only a excuse to make myself feel better. Be sure it was a bad tidings for me, but who know that when you indulged in it. When I

became to the fifth year in primary school to the second year of my secondary school, which is the same level as the fourth grade to eighth grade in America, I could still handle the homework in these few years by using the mathematics' theory that I learned before and sometime what I learned from the teacher in the lesson if I am not falling asleep. Luckily, I could still get my results around seventy something or higher marks in the quiz and exam. (You may say that the average or the grade were not bad, but it is not because most the time the quiz in our school are really easy and most people will get an A in all quizzes at least in my class)

Then, I could even feel I became a lazy person and keep changing the online games what I played repeatedly. It was wasting the money and time, moreover it made me do nothing at home except playing online games, eating and sleeping the things that I needed. I thought that that should be the main reason why I will get fall behind with my classmates who study with me in the my third year in school. And I felt like I didn't sense that I am in a crisis point then! Just feeling free and enjoy to living in my "own life". Then I almost got none knowledge buildup in next two years. Until an important exam (HKCEE) coming closer and closer, then it started make me feel nervous, but I still not going to study hard for the exam, is just sometimes took the book out and scan it one time as fast as I could for making my parents and me feeling more comfortable even I only got three month left before the HKCEE.

Finally, until I got an unsatisfactory results in the exam (HKCEE), which affect me could or could not get into Form six (twelve grade) or higher grade. I am so disappointed with my result and I have no idea how could I envisage my parents (I knew that it will come after I finished the exam). Suddenly, the "story" which my mother told me came out from my mind! And it made me knew about the secret of success! I knew that hard work can make for lack of talent, although I am well aware that it is too late for me to regret. So I started study hard for all subject (not just maths) from the year which I became a U.S. college student. And I know that I have to (should be, because it is my

last chance) go all out if I wanted to get a better and better grade from now on, it is a challenge because it's hard for me to quit playing online game or spending many time on the internet as same as the people who try to quit smoking or gamble.

Study what you learn just like a brick that as same as building your knowledge. Gaming or playing will be like raining, it may make you feel good or relax, but too much may slowing down your "building" efficiency or it may also destroy what you build. A thick wall or sand, what you wanted? That your choice.
