

## Tutorial 14    Mensuration

1. Find the area of the following figures:
  - a. A triangle with base = 10 cm and height = 5 cm
  - b. A circle with diameter = 10 cm
  - c. A trapezium with height = 8 cm, length of two parallel sides are 10 cm and 18 cm respectively
  - d. A sector of radius 12 cm and sector angle =  $45^\circ$ .
  
2. The internal measurements of a rectangular box 40cm x 120cm x 40cm. Three spheres of radius 20cm just fit in the box.
  - a. Calculate the volume of one sphere.
  - b. Calculate the unoccupied volume in the box.

3. A triangular prism has two parallel equilateral triangular faces. The length of one side of the triangular faces is 4cm. The length of the prism is 15 cm.
  - a. Find the volume of the prism.
  - b. Find the total surface area of the prism.

4. ABC is an isosceles triangle inscribed in a circle such that A, B and C are points on the circumference of the circle. AC is a diameter,  $AB = BC = 10$ cm. Find the area of the shaded portion.

**Solutions**

$$1a..Area = \frac{1}{2} \text{ base x height } A = \frac{1}{2} 10 \times 5 = 25 \text{ cm}^2$$

$$1b. Area = \pi r^2 = \pi 5^2 = 78.5 \text{ cm}^2$$

$$1c. Area = \frac{h}{2} (a+b) = \frac{8}{2} (10+18) = 112 \text{ cm}^2$$

$$1d. Area = \frac{1}{2} r^2 \theta = \frac{1}{2} 12^2 \frac{45\pi}{180} = 18\pi \text{ cm}^2$$

$$2a. \text{ Volume of sphere} = \frac{4}{3}\pi(20)^3 = 33510.3 \text{ cm}^3$$

$$2b. \text{ Unoccupied volume} = 1200 \times 40 \times 40 - 3(33510.3) = 91469 \text{ cm}^3$$

$$3a. \text{ Volume of prism} = \text{X-sectional area} \times \text{length}$$

$$= \frac{1}{2} 4 * 4 \sin 60^\circ (15) = 103.9 \text{ cm}^3$$

$$3b. \text{ Total surface area} = 2 * \left( \frac{1}{2} 4 * 4 \sin 60^\circ \right) + 3 * (4 * 15)$$

$$= 193.8 \text{ cm}^2$$

$$4. \text{ Area of } \triangle ABC = \frac{1}{2} (10)(10) = 50 \text{ cm}^2 \text{ (since } \triangle ABC \text{ is a right angle)}$$

$$\text{radius of circle} = \frac{1}{2} \sqrt{10^2 + 10^2} = \frac{1}{2} \sqrt{200}$$

$$\text{Area of the shaded portion} = \pi \left( \frac{1}{2} \sqrt{200} \right)^2 - 50$$

$$= 50(\pi - 1) = 107.1 \text{ cm}^2$$
