

GROUND WATER FOR WINDOWS – PREFACE

Version 1.31

Software designed and User Manual, on-line Help and Training Tutorial written by Jasminko Karanjac, Ph.D. (Civil & Geological Engineering). Software written by Dusan Braticovic, Ph.D. (Mathematics & Computer Graphics).

This manual, including the table of contents and graphics, was produced and printed using the Ventura Publisher desktop publishing software. Screen graphics was captured with the FreezeFrame package. Versions 1.20 and later have one additional module, Abstraction Application. The Government of Bahrain, Water Resources Directorate, Manama, Bahrain financed its development. Authors are grateful to Mr. Abdul Latif Bucheeri, Director for supporting the expansion of the GWW software. Information in this manual is subject to change without notice and does not present a commitment on the part of the United Nations or the authors.

The order of chapters and topics covered in this manual may appear to be out of sequence. For example, the chapters on additional chemical data processing, such as Chapter 19 – Concentration-Depth Series, and Chapter 20 – Concentration-Time Series could come after Chapter 7 – Chemistry. These applications have been added after the version 1.00 was completed and submitted to the United Nations.

The reader is advised to start with general topics presented in Chapters 2 and 3 (Data base structure and Forms, respectively) and read Chapter 5 (common routines). Other chapters may be read when relevant applications are used. Chapter 15 – Mapping is of general importance and contains the information, which is used in every application.

For comments, ideas, corrections, or problems noticed with this software, please e-mail or fax to J.Karanjac, telephone/fax +381-11-825-7877 (Yugoslavia). E-mail address:

karanjac@eunet.yu

Read also a special section, if any, at the end of each chapter. This section may contain updates, revisions, recent changes and/or modifications to the text in this manual.

NOTE. Version 1.31 is no longer the property of the United Nations. This is the authors' version. The United Nations stopped supporting further development of the software and has no right whatsoever in distributing this version.
