

GRATING SPECTROGRAPH

SOLAR SPECTRA

Solar spectra captured with an SC1 modified QCPro3000 camera. The image covers the 5270-5481Å region and is a composite of 10 x .5 sec exposures; dark subtracted, gamma corrected and slight sharpening performed with Paintshop Pro. Grayscale conversion and a medium strength unsharp masking applied.

Entrance slit: .0012"(30 microns) width
Camera lens: 112mm focal length 17mm diameter
Collimator: 135mm focal length 35mm diameter

Sept 28 - Oct 04, 2003

5270Å to 5481Å Top trace generated by R.O.Gray's SPECTRUM program. Gaussian smoothed to a resolution of 1.0Å
