

# ELIMINATES ALL SOURCE OF ORGANIC WASTE

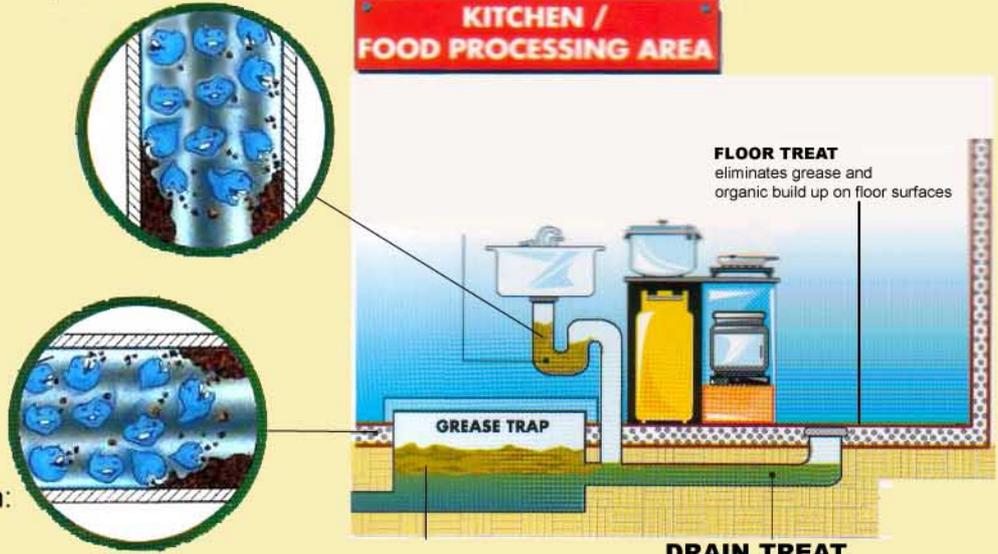

## BATHROOM / PUBLIC TOILETS

Biological Elimination of grease, oil and waste build-up in:

- Grease traps
- Drain lines
- Septic systems

## KITCHEN / FOOD PROCESSING AREA

Speeds up degradation of grease.  
Reduces grease pump-out.  
Reduces noxious odors and H<sub>2</sub>S gases.

### DRAIN TREAT

reduces the noxious odor associated with organic waste material within the drain line of the urinals, kitchen waste pipe, floor drains etc. Prevents back-ups. keeps drains clean and free flowing, allowing hygiene to be maintained. Eg. restaurants, hotels or food centres etc.

### GREASE TREAT

When applied to the source, the bacteria aerobically degrade the organic material, converting them into water and carbon dioxide. The aerobic bacteria out compete the anaerobic bacteria that are naturally present in the source, depleting the nutrients and prevent them from producing malodor like hydrogen sulphide, methane, ammonia and organic acid odors.

### SEPTIC TREAT

designed for septic systems to digest tissue paper, solid wastes, grease fats, oils and bottom sludge that accumulate in septic tanks and keep them free flowing. SEPTIC TREAT digests soaps and chemicals that are biodegradable.
